

## Process Engineer

This position is based in our headoffice in Siegen / Germany.

As a Process Engineer you will ensure that the design basis and contract information are complete and you will acquire any missing data if needed. You will seek clarification of ambiguous information via the project and proposal organization. Your main tasks consists of giving approval of all process design and engineering documents and make sure that all documents are correct through a review and check procedure established at the start of the project. Furthermore you will prepare heat and material balances, process simulation, sizing of equipment, preparation of Process Flow Diagrams and Piping & Instrument Diagrams, Hazard & Operability studies and develop related work.

### Profile

- Engineering Degree with good experience in the process design of refineries, chemical and petrochemical plants
- Several years of experience in the planning of refinery plants or plants in the chemical and petrochemical industry
- Fluent in English both verbal and written
- Flexible, analytic, quality driven and able to function independently, but also in a project team

### We offer:

- An informal and friendly working atmosphere;
- Dynamic and challenging assignments;
- International exposure;
- Opportunities for career growth.
